

9.0 Managing D2PC Model Data

D2PC model data is managed from the D2PC interface, which can be accessed from the D2PC toolbar button on the FEMIS Workbench, D2PC function box on the Navigator, Work Plan Activity window, Event Status Board, or AutoD2PC. On the D2PC interface window, select an option under the pull-down File menu. These options enable you to: 1) open a case, 2) save a case or save a case as a new case number, 3) delete more than one case, and 4) import more than one case. You can archive D2PC Cases by opening a new folder and marking the old folder for archival.

Figure 9.1. D2PC Interface Window

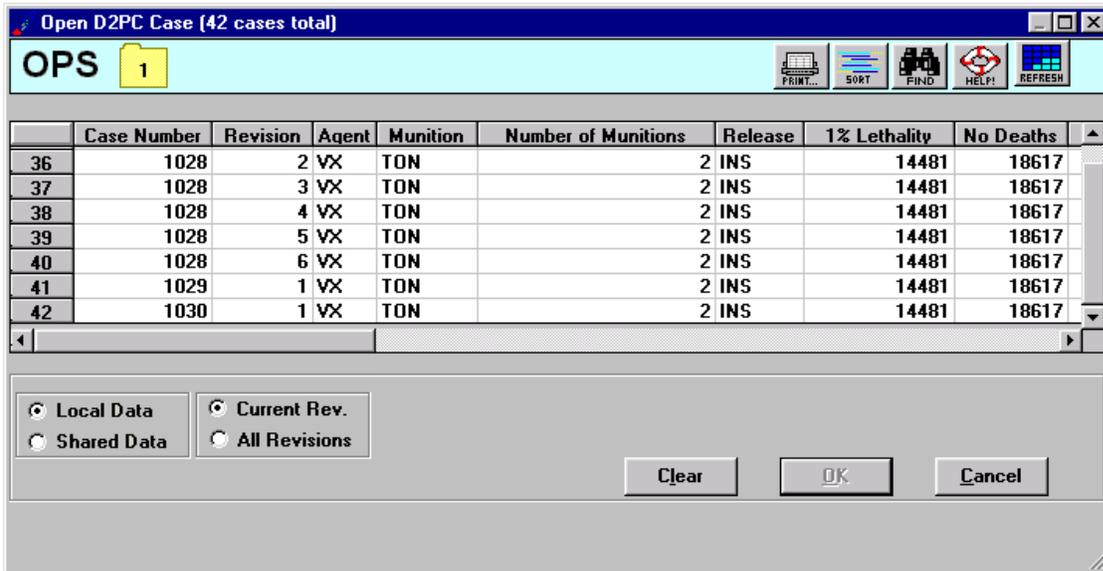

9.1 Opening a D2PC Case

When you select `Open Case`, the Open D2PC Case window displays with a list of the available D2PC cases. You have two options to open a case. To open a case from the list, either double-click on any cell for the case you want to open or click once to highlight the case and then click the `OK` button.

D2PC cases are managed using the Open D2PC Case window. You have several options regarding the cases that will be displayed. The `Local Data` or `Shared Data` options let you select only your EOC (local) or all EOCs (shared) cases to be displayed. The `Current Rev.` or `All Revisions`

options let you select only the latest revision of each case (all revisions for the case number that includes the current operational case) or all revisions of all cases to be displayed.

9.2 Saving a D2PC Case

The **Save Case** options enable you to save any changes to the current D2PC case. Before you can save a case, you must activate the **Edit** radio button on the D2PC interface window.

The **Save Case** option saves your changes to the next available case number. The **Save Case As** option enables you to save D2PC case changes to a new case number, which you can specify.

1. When you select the **Save Case As** option, the **Save D2PC Case As** window will display.

Figure 9.3. Save D2PC Case As Window

2. A suggested new case number will be displayed in the `New Case Number` field. If you do not want to use the suggested case number, you can enter your own number.
3. In the `Case Description` field, you may enter a case description, which could include details such as the type of release, wind speed, and temperature, or you can accept the default description.
4. Click on the `OK` button to save the D2PC case to accept the new case number, or click on the `Cancel` button to close the window without saving the case.

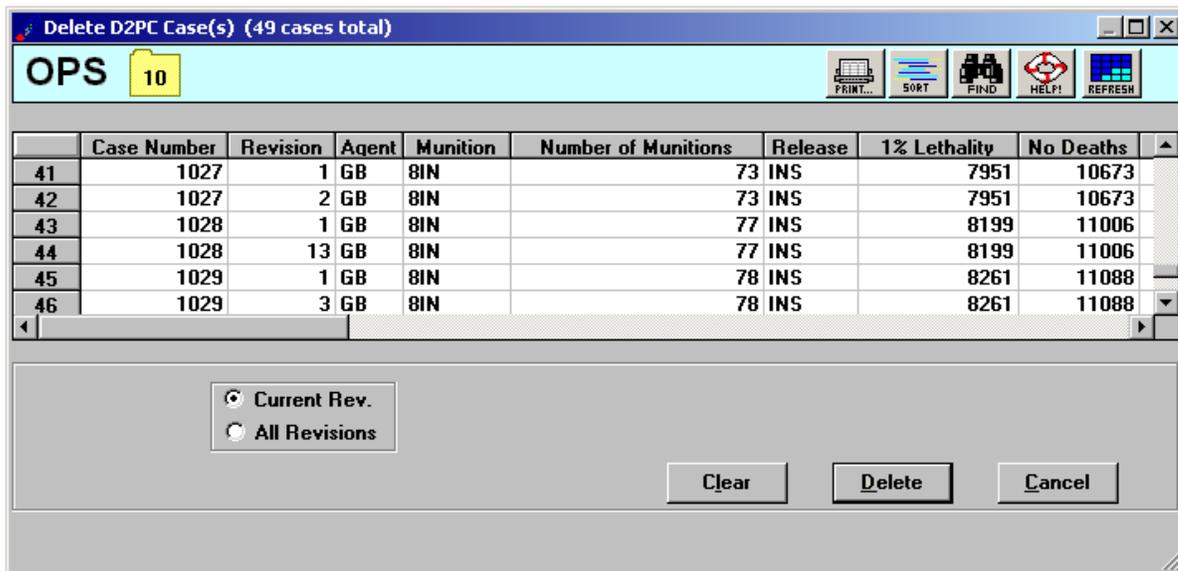

9.3 Deleting a D2PC Case

To delete a D2PC case, complete the following steps.

1. Select `Delete Case(s)` from the `File` pull-down menu. The `Delete D2PC Case(s)` window will display.
2. Select the D2PC case or cases you want to delete. If you want to delete more than one case, hold down the `<Ctrl>` key while you click on the additional cases. To delete contiguous rows (cases), you can either hold down the `<Shift>` key while you click on the first and last cases to be deleted or drag the cursor over the rows to select the range of cases to be deleted. Click the `OK` button. A message will display requesting verification of the cases to be deleted. Click the `Yes` button to delete, or click the `No` button to cancel.

Note: You cannot delete the current operational case. If the case you want to delete is the current case, select a different case to be your current case; then you can delete the desired case.

9.4 Importing a D2PC Case

To import a D2PC case, complete the following steps.

1. Select the **Import Case(s)** option from the **File** pull-down menu. The **Import D2PC** window will display.

Figure 9.5. Import D2PC Window

2. The two options available for importing a case are
 - **Pick Case File to Import**, which will import a single case. The default extension for a D2PC Case File is `.dat`.
 - **Pick Case List to Import**, which will import multiple cases. Before you can import this list, you will need to create a Case List. You must use an editor and produce a file that contains the full path name for each D2PC case included in the Case List. The default list file extension is `*.lst`; an example filename is `myd2list.lst`.

Files with other extensions can be displayed by changing the extension shown in the **List files of type** box on the **Pick D2PC Case Import** window.

3. To find the file you want to import, click on the drive and file path name until the file you want is listed. Select the file from the list, and click **OK**.

For more details regarding managing D2PC cases, see the FEMIS Online Help.
