

# Home Perspective

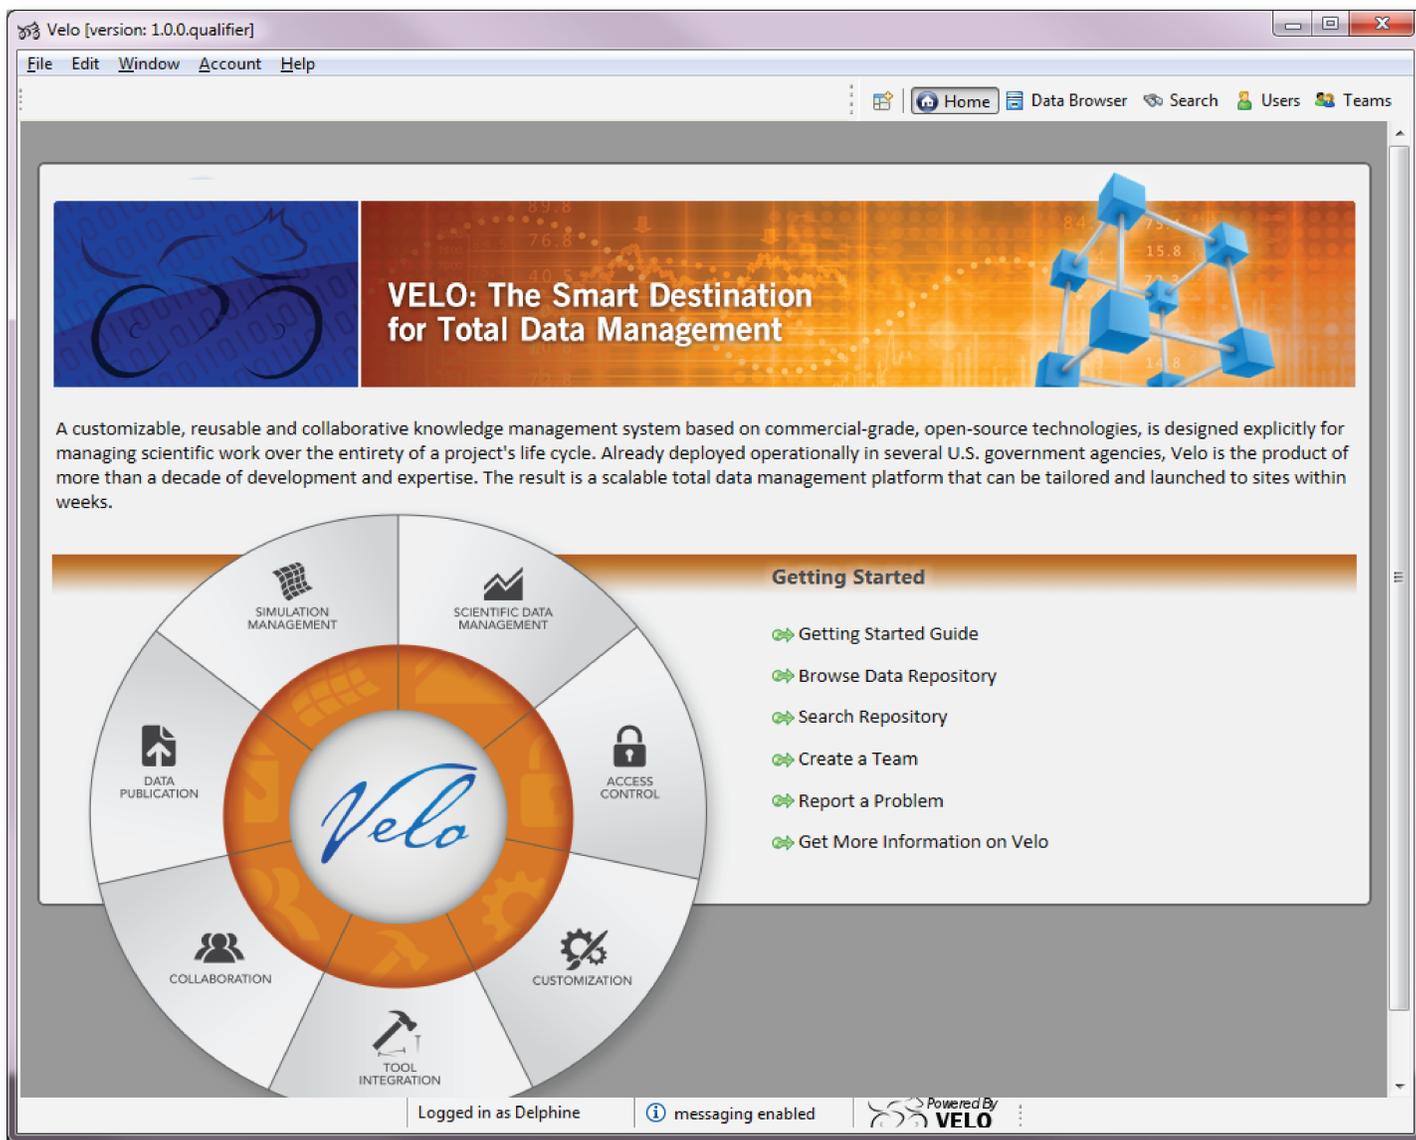

## Home Perspective Structure

The **Home perspective** is the first page the user sees when Velo is launched (Figure 1). Its purpose is to provide a gateway to the Velo platform. From this window basic features of the application can be accessed, which include

- Getting Started which, which links to the general Help of Velo Data Management Platform.
- Browsing Data Repository, which links to the [Data Browser](#) perspective
- Searching Repository, which links to the  [Search](#) perspective
- Creating a Team, which links to the  [Teams](#) perspective

Clicking on the *Report a Problem* link, however, does not result in opening a new perspective. Rather, an email link is provided for reporting issues with the software (email to [support.velo@pnnl.gov](mailto:support.velo@pnnl.gov)).

Users interested in learning more about Velo's capabilities is invited to visit the Velo's page by clicking on [Get More Information on Velo](#).

## VELO: The Smart Destination for Total Data Management

A customizable, reusable and collaborative knowledge management system based on commercial-grade, open-source technologies, is designed explicitly for managing scientific work over the entirety of a project's life cycle. Already deployed operationally in several U.S. government agencies, Velo is the product of more than a decade of development and expertise. The result is a scalable total data management platform that can be tailored and launched to sites within weeks.

**Getting Started**

- Getting Started Guide
- Browse Data Repository
- Search Repository
- Create a Team
- Report a Problem
- Get More Information on Velo
