## Medical Radioisotope Data Survey: 2002 Preliminary Results

E.R. Siciliano

June 23, 2004

Prepared for
U.S. Customs and Border Protection under
DOE Contract DE-AC06-76RL01830 Interagency Agreement: 1X03-1461 by
Pacific Northwest National Laboratory
P.O. Box 999
Richland, Washington 99352

**Document Number PIET-43741-TM-197** 

PNNL Document Number PNNL-14882

#### SUMMARY

A limited, but accurate amount of detailed information about the radioactive isotopes used in the U.S. for medical procedures was collected from a local hospital and from a recent report on the U.S. Radiopharmaceutical Markets. These data included the total number of procedures, the specific types of procedures, the specific radioisotopes used in these procedures, and the dosage administered per procedure. The information from these sources was compiled, assessed, pruned, and then merged into a single, comprehensive and consistent set of results presented in this report. A summary of these results is given in Table 2-1, and displayed as distributions in Figures 1a and 1b.

The main findings from this preliminary survey are:

- A total of approximately 14.4 million medical procedures using radioisotopes were performed in the U.S. during 2001.
- Of this total number of procedures during 2001, approximately 14.2 million were diagnostic procedures and 0.2 million were therapeutic procedures.
- Although there were over 45 different commercially-available products used in over 75 different types of procedures, there were only 17 different isotopes used as radioactive agents in these products.
- Of these 17 different isotopes, 12 are customarily administered to outpatients, and at 91.5 %, the isotope Tc-99m is by an overwhelming margin the most likely isotope to be administered.

#### 1.0 Introduction

#### 1.1 Motivation

Each day in the U.S., over 39,000 medical procedures are performed that use radioactive isotopes. The overwhelming majority of these procedures are diagnostic in nature, and performed on an out-patient basis, i.e., most of these patients are free to move about in less than 24 hours after receiving the initial dose. Within that time period, most of these patients, traveling either as pedestrians or as passengers in vehicles, may cause alarms in various handheld or roadside radiation detectors. As local governments, as well as the Department of Homeland Security (DHS), Customs and Border Protection (CBP), implements their task to detect the illicit transport of nuclear material, the presence of radiation detectors will increase. The information on medical isotopes compiled in this survey should help in estimating the frequency and signatures of these "innocent" medical-based alarms.

#### 1.2 Objective

The objective of this survey was to obtain accurate, up-to-date information about the radioactive isotopes used in the U.S. for medical procedures. The categories of data sought were the total number of such procedures, the specific types of procedures, the specific radioisotopes used in these procedures, and the dosage administered per procedure. The results presented in this Preliminary Survey do not represent an exhaustive search, and thus, should be considered as initial estimates. However, because the data used to obtain these preliminary results was of high quality, the results are expected to be reasonably accurate.

#### 1.3 Data Sources

The data collected for this Preliminary Survey was obtained from the three sources (listed in the Reference section, below). These sources represent the Medical community, the Business & Finance community, and the Applied Nuclear Science community. Because these professions have been compiling information for different purposes, data from all three sources were needed to cover the range of our objectives.

To attain a single, comprehensive and consistent set of data, the information from the above three sources was compiled, assessed, pruned, and then merged to give the results shown in the body of this report. This information is used as an initial database for estimating the number and characteristic signature of medical incidents that may be detected by radiation portal monitors.

A summary of the Preliminary Survey results is given in Table 1, and displayed as distributions in Figure 2-1. The sets of data used to obtain this summary are listed in Table 2, Table 3, and Table 4 in the Data Tables section at the end of this report. Background discussion and more detailed comments about these sets of data are given in the Sections 2. 3, and 4 below.

#### 2.0 MEDICAL DATA

The data from the Medical community were obtained from the records of the Nuclear Medicine Department of a local hospital in Richland WA (Ref.1). The period covered by these records was from January 01, 2001 through November 23, 2002. The original data were listed in two different types of data records: Statistical Report sheets and Exam Master File sheets. The Statistical Report sheets listed the Exam Types, the number of each Exam Type given over the period of the report, and the Patient Type (e.g. In-Patient, Out-Patient, etc.). The Exam Master File sheets listed Exam Reference Numbers (Exam R#) for each Exam Type, the Radiopharmaceutical Product used for each Exam R#, and the range of activity for each Radiopharmaceutical Product. The data from these original records were cross-referenced, checked for consistency, and merged into the set of data listed in Table 2 (listed in the Data Tables section at the end of this report).

From the data listed in Table 2, it is seen a total of 2797 exams were performed on 2694 patients (i.e., 1.04 exams per patient) over the base-year period of 1 January 2001 - 31 December 2001. The breakdown of these exams was 39.24 % male, 58.20 % female, and 2.41 % pediatric. The majority of these exams (91 %) were administered to out patients.

#### 3.0 BUSINESS & FINANCE DATA

The data from the Business & Finance community were taken from a recent report by Frost & Sullivan entitled "U.S. Radiopharmaceuticals Markets." (Ref.2). The overall objective of this report was to assess the current state of the various sectors of U.S. markets, and predict the behavior of the individual market sectors in the near future. The data in the report covers the eleven-year period from 1998 through 2008; where the 2001 data are used as the base year. The data listed for 2002 – 2008 were extrapolated from the earlier data by using reasonably sound economic assumptions, and, depending on the particular market sector, amounted to compound annual growth rates from approximately 2 % to 6 %.

Because of the financial perspective of this report, the data from this source is organized according to the dominant market sectors, with emphasis on market-place drivers and projected revenues. Medical procedure types define the market sectors, where the topmost major division of the overall market is made between Diagnostic and Therapeutic procedures. These two major sectors are further broken down into their dominant components of three diagnostic sub-sectors and two therapeutic sub-sectors. These sub-sectors are Diagnostic-Cardiac, Diagnostic-PET/FDG, Diagnostic-Other, and Therapeutic-Bone and Therapeutic-Thyroid. All other therapeutic procedures, such as brachytherapy seeds (Cesium-137 implants) and Rhenium-188 therapy (following vascular stents for prevention of restenosis) were not considered significant for the purposes of this report; and thus were omitted. For each one of the five sub-sectors, we were able to obtain (or deduce) from the information in this report data on the total number of procedures, the dominant products used for these procedures, and the isotope used in each of the products. This information was distributed throughout the report as textual comments or in various tables.

According to this report, there were a total of 14.19 E+6 Diagnostic procedures compared to approximately 0.20 E+6 Therapeutic procedures performed in the U.S during 2001. The total number of Diagnostic procedures consists of three main categories: 0.29 E+06 FDG (Pet Scans), 5.83 E+06 Cardiology, and 8.08 E+06 Other. The detailed information used to correlate and cross-reference the number of procedures in each of these categories to specific isotopes is summarized in Table 3 (listed in the Data Tables section at the end of this report).

#### 4.0 APPLIED NUCLEAR SCIENCE DATA

The data from the field of Applied Nuclear Science was obtained from R.E. Schenter in the form of a private communication. Dr. Schenter has compiled a comprehensive list of 111 isotopes and their applications from the field of Nuclear Medicine. Note that most of these isotopes have been used in medical research projects, and are not commercially produced. Therefore they are unlikely to be seen at ports of entry into the U.S. Nevertheless, this list is important to have as a reference because some of these isotopes may eventually find their way into the commercial markets.

#### NOTES:

Products listed Market Sector, then top-down by percent. Some products are supplied by more than one manufacturer.

#### **Application Key**

MP => Myocardial Perfusion

BP => Blood Pool

MV => Myocardial Viability
RBC => Red Blood Cells
WBC => White Blood Cells
GI => Gastrointestinal

RC => Reticuloendothelial Cells

CSF =>

Table 4: Medical Isotope Application Data from Ref.3.

| ISOTOPE | Half-Life | APPLICATIONS   |
|---------|-----------|--|
| Ac-225  | 10.0d     | Monoclonal antibody attachment used for cancer treatment (RIT), also parent of Bi-213.   |
| Ac-227  | 21.8y     | Parent of Ra-223 (Monoclonal antibody attachment used for cancer treatment (RIT).  |
| Am-241  | 432y      | Osteoporosis detection, heart imaging.   |
| As-72   | 26.0h     | Planar imaging, SPECT or PET.  |
| As-74   | 17.8d     | Positron-emitting isotope with biomedical applications.  |
| At-211  | 7.21h     | Monoclonal antibody attachment (alpha emitter) used for cancer treatment (RIT), used with F-18 for in vivo studies.  |
| Au-198  | 2.69d     | Cancer treatment using mini-gun (B), treating ovarian, prostate, and brain cancer.   |
| B-11    | Stable    | Melanoma and brain tumor treatment.  |
| Be-7    | 53.2d     | Used in berylliosis studies.   |
| Bi-212  | 1.10h     | Monoclonal antibody attachment (alpha emitter) used for cancer treatment (RIT), cellular dosimetry studies.  |
| Bi-213  | 45.6m     | Monoclonal antibody attachment (alpha emitter) used for cancer treatment (RIT).  |
| Br-75   | 98m       | Planar imaging, SPECT or PET (C).  |
| Br-77   | 57h       | Label radiosentizers for Te quantization of hypoxia in tumors, and monoclonal antibody labeling.   |
| C-11    | 20.3m     | Radiotracer in PET scans to study normal/abnormal brain functions.   |
| C-14    | 5730y     | Radiolabeling for detection of tumors (breast, et al.).  |
| Ca-48   | Stable    |  |
| Cd-109  | 462d      | Cancer detection (C), pediatric imaging (C).   |
| Ce-139  | 138d      | Calibrates high-purity germanium gamma detectors <medical application?="">.</medical>  |
| Ce-141  | 32.5d     | Gastrointestinal tract diagnosis, measuring regional myocardial blood flow.  |
| Cf-252  | 2.64y     | Cervical, melanoma, brain cancer treatment.  |
| Co-55   | 17.5h     | Planar imaging, SPECT or PET (B). Used in PET imaging of damaged brain tissue after stroke.  |
| Co-57   | 272d      | Gamma camera calibration, should be given high priority, radiotracer in research and a source for X-ray fluorescence spectroscopy.   |
| Co-60   | 5.27y     | Teletherapy (destroy cancer cells), disinfect surgical equipment and medicines, external radiation cancer therapy (E).   |
| Cr-51   | 27.7d     | Medical, cell labeling and dosimetry.  |
| Cs-130  | 29.2m     | Myocardial localizing agent.   |
| Cs-131  | 9.69d     | Intracavity implants for radiotherapy.   |
| Cs-137  | 30.2y     | Blood irradiators, PET imaging, tumor treatment.   |
| Cu-61   | 3.35h     | Planar imaging, SPECT or PET (B).  |
| Cu-62   | 4.7m      | Positron emitting radionuclide (B), cerebral and myocardial blood flow used As-a tracer in conjunction with Cu 64 (B).   |
| Cu-64   | 12.7h     | PET scanning (C), planar imaging (C), SPECT imaging (C) dosimetry studies (C), cerebral and myocardial blood flow (C), used with Cu-62 (C), treating of colorectal cancer. |
| Cu-67   | 61.9h     | Cancer treatment/diagnostics, monoclonal antibodies, radioimmunotherapy, planar imaging, SPECT or PET.   |
| Dy-165  | 2.33h     | Radiation synovectomy, rheumatoid arthritis treatment.   |
| Eu-152  | 13.4y     | Medical.   |
| Eu-155  | 4.73y     | Osteoporosis detection.  |

| ISOTOPE | Half-Life | APPLICATIONS   |
|---------|-----------|--|
| F-18    | 110m      | Radiotracer for brain studies (C), PET imaging (C).  |
| Fe-55   | 2.73y     | Heat source <medical application?="">.</medical>   |
| Fe-59   | 44.5d     | Medical.   |
| Ga-64   | 2.63m     | Treatment of pulmonary diseases ending in fibrosis of lungs.   |
| Ga-67   | 78.3h     | Imaging of abdominal infections (C), detect Hodgkins/non-Hodgkins lymphoma (C), used with In-111 for soft tissue infections and osteomyelitis detection (C), evaluate sarcoidiodis and other granulomaous diseases, particularly in lungs and mediastiusim (C).  |
| Ga-68   | 68.1m     | Study thrombosis and atherosclerosis, PET imaging, detection of pancreatic cancer, attenuation correction.   |
| Gd-153  | 242d      | Dual photon source, osteoporosis detection, SPECT imaging.   |
| Ge-68   | 271d      | PET imaging.   |
| H-3     | 12.3y     | Labeling, PET imaging.   |
| I-122   | 3.6m      | Brain blood flow studies.  |
| I-123   | 13.1h     | Brain, thyroid, kidney, and myocardial imaging (C), cerebral blood flow (ideal for imaging) (C), neurological disease (Alzheimer's) (C).   |
| I-124   | 4.17d     | Radiotracer used to create images of human thyroid, PET imaging.   |
| I-125   | 59.9d     | Osteoporosis detection, diagnostic imaging, tracer for drugs, monoclonal antibodies, brain cancer treatment (I-131 replacement), SPECT imaging, radiolabeling, tumor imaging, mapping of receptors in the brain (A), interstitial radiation therapy (brachytherapy) for treatment of prostate cancer (E).  |
| I-131   | 8.04d     | Lymphoid tissue tumor/hyperthyroidism treatment (C), antibody labeling (C), brain biochemistry in mental illness (C), kidney agent (C), thyroid problems (C), alternative to TI-201 for radioimmunotherapy (C), imaging, cellular dosimetry, scintigraphy, treatment of graves disease, treatment of goiters, SPECT imaging, treatment of prostate cancer, treatment of hepatocellular carcinoma, treatment of melanoma (A), locate osteomyelitis infections (A), radiolabeling (A), localize tumors for removal (A), treatment of spinal tumor (A), locate metastatic lesions (A), treAt-neuroblastoma (A), internal (systemic) radiation therapy (E), treatment of carcinoma of the thyroid (E). |
| I-132   | 2.28h     | Mapping precise area of brain tumor before operating.  |
| In-111  | 2.81d     | Detection of heart transplant rejection (C), imaging of abdominal infections (C), antibody labeling (C) cellular immunology (C), used with Ga-67 for soft tissue infection detection and ostemyelitis detection (C), concentrates in liver, kidneys (C), high specific activity (C), white blood cell imaging, cellular dosimetry, myocardial scans, treatment of leukemia, imaging tumors.  |
| In-115m | 4.49h     | Label blood elements for evaluating inflammatory bowel disease.  |
| Ir-191m | 6s        | Cardiovascular angiography.  |
| Ir-192  | 73.8d     | Implants or "seeds" for treatment of cancers of the prostate, brain, breast, gynecological cancers.  |
| Kr-81m  | 13.3s     | Lung imaging.  |
| Lu-177  | 6.68d     | Heart disease treatment (restenosis therapy), cancer therapy.  |
| Mn-51   | 46.2m     | Myocardial localizing agent.   |
| Mn-52   | 5.59d     | PET scanning.  |
| Mo-99   | 65.9h     | Parent for Tc-99m generator used for brain, liver, lungs, heart imaging.   |
| N-13    | 9.97m     | PET imaging, myocardial perfusion.   |
| Nb-95   | 35d       | Study effects of radioactivity on pregnant women and fetus, myocardial tracer, PET imaging.  |
| O-15    | 122s      | Water used for tomographic measuring of cerebral blood flow (C), PET imaging (C),  |

| ISOTOPE | Half-Life | APPLICATIONS   |
|---------|-----------|--|
|         |           | SPECT imaging.   |
| Os-191  | 15.4d     | Parent for Ir-191m generator used for cardiovascular angiography.  |
| Os-194  | 6.00y     | Monoclonal antibody attachment used for cancer treatment (RIT).  |
| P-32    | 14.3d     | Polycythaemia Rubra Vera (blood cell disease) and leukemia treatment, bone disease diagnosis/treatment, SPECT imaging of tumors (A), pancreatic cancer treatment (A), radiolabeling (A).   |
| P-33    | 25d       | Labeling.  |
| Pb-203  | 2.16d     | Planar imaging, SPECT or PET (used with Bi-212) (B), monoclonal antibody immunotherapy (B), cellular dosimetry.  |
| Pb-212  | 10.6h     | Radioactive label for therapy using antibodies, cellular dosimetry.  |
| Pd-103  | 17d       | Prostate cancer treatment.   |
| Pd-109  | 13.4h     | Potential radiotherapeutic agent.  |
| Pu-238  | 2.3y      | Pacemaker (no Pu-236 contaminants).  |
| Ra-223  | 11.4d     | Monoclonal antibody attachment (alpha emitter) used for cancer treatment (RIT).  |
| Ra-226  | 1.60e3y   | Target isotope to make Ac-227, Th-228, Th-229 (Parents of alpha emitters used for RIT).  |
| Rb-82   | 1.27m     | Myocardial imaging agent, early detection of coronary artery disease, PET imaging, blood flow tracers.   |
| Re-186  | 3.9d      | Cancer treatment/diagnostics, monoclonal antibodies, bone cancer pain relief, treatment of rheumatoid arthritis, treatment of prostate cancer, treating bone pain.   |
| Re-188  | 17h       | Monoclonal antibodies, cancer treatment.   |
| Rh-105  | 35.4h     | Potential therapeutic applications: target neoplastic cells (e.g., small cell lung cancer) (A), labeling of molecules and monoclonal antibodies (A).   |
| Ru-97   | 2.89d     | Monoclonal antibodies label (C), planar imaging (C), SPECT or PET techniques (C), gamma-camera imaging.  |
| Ru-103  | 39d       | Myocardial blood flow, radiolabeling mircospheres, PET imaging.  |
| S-35    | 87.2d     | Nucleic acid labeling, P-32 replacement, cellular dosimetry.   |
| Sc-46   | 84d       | Regional blood flow studies, PET imaging.  |
| Sc-47   | 3.34d     | Cancer treatment/diagnostics (F), monoclonal antibodies (F), radioimmunotherapy (F).   |
| Se-72   | 8.4d      | Brain imaging, generator system with As-72, monoclonal antibody immunotherapy.   |
| Se-75   | 120d      | Radiotracer used in brain studies, scintigraphy scanning.  |
| Si-28   | Stable    | Radiation therapy of cancer.   |
| Sm-145  | 340d      | Brain cancer treatment using I-127 (D).  |
| Sm-153  | 2.00d     | Cancer treatment/diagnostics (C), monoclonal antibodies (C), bone cancer pain relief (C), higher uptake in diseased bone than Re-186 (C), treatment of leukemia.   |
| Sn-117m | 13.6d     | Bone cancer pain relief.   |
| Sr-85   | 65.0d     | Detection of focal bone lesions, brain scans.  |
| Sr-89   | 50d       | Bone cancer pain palliation (improves the quality of life), cellular dosimetry, treatment of prostate cancer, treatment of multiple myeloma, osteoblastic therapy, potential agent for treatment of bone metastases from prostate and breast cancer (E). |
| Sr-90   | 29.1y     | Generator system with Y-90 (B), monoclonal antibody immunotherapy (B).   |
| Ta-178  | 9.3m      | Radionuclide injected into patients to allow viewing of heart and blood vessels.   |
| Ta-179  | 1.8y      | X-ray fluorescence source and in thickness gauging (might be a good substitute for Am-241).  |
| Ta-182  | 115d      | Bladder cancer treatment, internal implants.   |
| Tb-149  | 4.13h     | Monoclonal antibody attachment used for cancer treatment (RIT).  |

| ISOTOPE | Half-Life | APPLICATIONS   |
|---------|-----------|--|
| Tc-96   | 4.3d      | Animal studies with Tc-99m.  |
| Tc-99m  | 6.01h     | Brain, heart, liver (gastoenterology), lungs, bones, thyroid, and kidney imaging (C), regional cerebral blood flow (C), equine nuclear imaging (C), antibodies (C), red blood cells (C), replacement for Tl-201 (C).   |
| Th-228  | 720d      | Cancer treatment, monoclonal antibodies, parent of Bi-212.   |
| Th-229  | 7300y     | Grandparent for alpha emitter (Bi-213) used for cancer treatment (RIT), parent of Ac-225.  |
| TI-201  | 73.1h     | Clinical cardiology (C), heart imaging (C), less desirable nuclear characteristics than Tc-99m for planar and SPECT imaging (C), myocardial perfusion, cellular dosimetry.   |
| Tm-170  | 129d      | Portable blood irradiations for leukemia, lymphoma treatment, power source.  |
| Tm-171  | 1.9y      | Medical.   |
| W-188   | 69.4d     | Cancer treatment, monoclonal antibodies, parent for Re-188 generator.  |
| Xe-127  | 36.4d     | Neuroimaging for brain disorders, research for variety of neuropsychiatric disorders, especially schizophrenia and dementia, higher resolution SPECT studies with lower patient dose, lung imaging (some experts believe it is superior to Xe-133 in inhalation lung studies). |
| Xe-133  | 5.25d     | Lung imaging (C), regional cerebral blood flow (C), liver imaging (gas inhalation) (C), SPECT imaging of brain, lung scanning, lesion detection.   |
| Y-88    | 107d      | Substituted for Y-90 in development of cancer tumor therapy.   |
| Y-90    | 64h       | Internal radiation therapy of liver cancer (C), monoclonal antibodies (C), Hodgkins disease, and hepatoma (C), cellular dosimetry, treating rheumatoid arthritis, treating breast cancer, treatment of gastrointestinal adenocarcinomas (A).                                   |
| Y-91    | 58.5d     | Cancer treatment (RIT), cellular dosimetry.  |
| Yb-169  | 32d       | Gastrointestinal tract diagnosis.  |
| Zn-62   | 9.22h     | Parent of Cu-62, a positron-emitter, used for the study of cerebral and myocardial blood flow.   |
| Zn-65   | 244d      | Medical.   |
| Zr-95   | 64.0d     | Medical.   |
