

HP has established a balanced portfolio in nanotechnology platforms. The portfolio leverages HP's existing and extensive set of microtechnology capabilities including semiconductors, micromachining, microfluidics, materials, integration, and packaging. HP has added specific nano-based capabilities in a fashion that allows rapid integration with its existing capabilities for new and existing product commercialization. Additionally, we have partnered strategically with select universities, national labs, and internally with HP Labs to develop technology breakthroughs to feed its portfolio.
